JOURNAL OF CRYSTAL GROWTH

Subject index

Aluminum
– antimonide 1
– gallium arsenide 129, 135
– organic 135
– antimony
– organic 15, 155
Apparatus
– for thin film growth
– – by liquid phase epitaxy
– – – using electroepitaxy
– – – – of gallium arsenide 141
– – by molecular beam epitaxy
– – – using RF magnetron sputtering
– – – – of zinc sulphide 172
– for miscellaneous purposes
– – controlling crystal axis in capillary, of Bridgman growth 66
Arsenic
– organic 124

Barium
– titanate 227

Cadmium
– iodide 365
– mercury telluride 176
– zinc telluride 40
Calcite 261
Calcium
– carbonate 261, 269
Cellular growth
– of binary alloys 317
Characterization
– by chemical etching
– – of dislocations in yttrium barium cuprate 110
– by electron microscopy
– – of lattice defects in gallium arsenide 22
– – of phase separation in cadmium zinc telluride 40
– by ion channeling
– – of quantum well structures InGaAs/GaAs 29
– by photon correlation spectroscopy
– – of lysozyme 71
Convection 317, 334
Copper
– basic compounds of 277
– gallium diselenide 213
– indium diselenide 213
– (I) oxide 221
– (II) oxide 221

Device characterization
– diodes 129
– heterojunction 129
– lasers 7, 129, 135
– quantum wells 7, 29, 135, 162
Diamond 46, 206
Diffusional control
– of binary alloy 335
Diodes, see Device characterization
Dissolution
– of binary alloy 334
– of nickel hydroxide 256
– of potassium sulphate 287
– of urea 369
– of vaterite 269
Dysprosium
– gallium garnet 232

Epitaxy, see Thin film growth
Etching
– chemical 110, 184
Eutectic growth
– of nickel–aluminum 86

Fullerenes 58

Gallium
– antimonide 1, 115
– arsenide 22, 124, 141, 349, 354
– indium arsenide phosphide 7
– organic 135
Garnets 232, 243

Heterojunction, see Device characterization
Hydrodynamics, see Convection

Ice 301
Indium
– antimonide 15
– arsenide 1

– gallium arsenide 29
– organic 155
– phosphide arsenide antimonide 155

Kinetics
– of dissolution 269
– of growth 15, 115, 141, 194, 200, 261, 334, 365
– of growth, numerical solution for 141
– of interface control 115, 301, 334
– of pore growth 294
– of twinning 359

Lasers, see Device characterization
Lasers, crystals for
– aluminum gallium arsenide 129
– gallium indium arsenide phosphide 7
Lysozyme 71, 79

Manganese
– arsenide 237
– organic 237
Melt growth technique
– by Bridgman–Stockbarger method
– – of cadmium zinc telluride 40
– – of organic crystal 66
– – of zinc selenide 359
– by Czochralski method
– – of dysprosium gallium garnet 232
– by floating zone method
– – of nickel aluminate 311
– – of yttrium iron garnet 243
– by uniaxial solidification
– – theory of 317
– theory of 294
Mercury
– cadmium telluride 176
Microgravity, growth under
– of binary alloy 334
– of lysozyme 79
Morphological stability
– of cadmium zinc telluride 40
– of directional solidification 317
– of ice 301

Nickel
– aluminate 311
– aluminum eutectic 86
– ammonium phosphate hexahydrate 256
Nucleation
– of graphite in diamond 46
– of lysozyme 71, 79
– of nickel ammonium phosphate hexahydrate 256
– of pores 294
– of protein, small 249
Numbers
– Grashof 334
– Rayleigh 334

Periodic bond chain theory
– of particle morphology, basic copper compounds 277
Phase diagrams
– of diamond 46
– of graphite 46
– of indium phosphide/indium arsenide/indium antimonide 155
– of nickel aluminate 311
– of protein, small 249
Potassium
– sulphate 287
Precursor
– for aluminum gallium arsenide 135
– for gallium arsenide 124
– for indium antimonide 15
Proteins 249
Purification of materials
– of precursors for aluminum gallium arsenide 135

Quantum wells, see Device characterization

Scandium
– tungstate 362
Selenium
– organic 213
Silicon 103, 184, 349
– carbide 103
– germanium 194
Solid growth technique
– by ion implantation
– – of barium titanate 227
Solution growth technique
– by flux method
– – of scandium tungstate 362
– – of yttrium barium cuprate 110, 200
– by low temperature method
– – of basic copper compounds 277
– – of cadmium iodide 365
– – of calcite 261
– – of lysozyme 71, 79
– – of protein, small 249
– – of vaterite 269
Superconductivity materials, high T_c
– bulk
– – of YBCO 40, 200
Surface structure
– of fullerenes 58
– of silicon 349

Thermodynamics
– of chemical vapor deposition process 103
Thin film growth, epitaxy
– by combustion-flame method
– – of diamond 206
– by liquid phase electroepitaxy
– – of gallium arsenide 141
– by liquid phase epitaxy
– – of mercury cadmium telluride 176

– – theory of 176, 334
– by molecular beam epitaxy
– – of aluminum antimonide 1
– – of copper(I) oxide 221
– – of copper(II) oxide 221
– – of gallium antimonide 1, 115
– – of gallium arsenide 354
– – of indium arsenide 1
– – of indium gallium arsenide 29
– – of silicon 184
– – of silicon germanium 194
– – of zinc selenide 162
– – of zinc sulphoselenide 162
– – theory of 194
– – using RF magnetron sputtering
– – – of zinc sulphide 172
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of copper gallium diselenide 213
– – – of copper indium diselenide 213
– – – of gallium arsenide 349
– – – of silicon 103
– – – of silicon carbide 103
– – – theory of 103
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 129, 135
– – – of gallium arsenide 124
– – – of gallium indium arsenide phosphide 7
– – – of indium antimonide 15
– – – of indium phosphide arsenide antimonide 155
– – – of manganese arsenide 237
Twinning
– of zinc selenide 359

Urea 369

Vapor growth technique
– by chemical transport
– – of silicon 103
– – of silicon carbide 103
– – theory of 103
Vaterite 269

Yttrium
– barium cuprate 110, 200
– iron garnet 243

Zinc
– selenide 162, 359
– sulphide 172
– sulphoselenide 162
